

## 4-axled tank wagon

Type: Zacns 41m<sup>3</sup> • for sulphuric acid

|                                |   |
|--------------------------------|---|
| Number of axles:               | 4 axles   |
| Length over buffers:           | 14,400 mm   |
| Distance between bogie pivots: | 9,360 mm  |
| Volume:                        | 41 m <sup>3</sup>                                 |
| Heating system:                | No  |
| Insulation:                    | Yes   |
| Material:                      | S355J2+N / P355GH                                 |
| Tank code:                     | L10 DH  |
| Type of dome:                  | Chemical dome DN 500, EN 12561-6                  |
| Characteristics:               | Suitable for the transportation of sulphuric acid |
